PROFESSIONAL SUMMARY

Full-stack engineer with 6+ years shipping secure, reliable production systems in an async, high-ownership way. Deep in the JavaScript/TypeScript ecosystem (Node.js/NestJS, React, Next.js) on PostgreSQL and AWS with CI/CD (GitHub Actions). I like clear specs and simple, well-separated services. Most recently I built a multi-chain block indexer that relays on-chain payment data to backend services, using forward and configurable backward indexers, periodic cleanup jobs to keep the database lean, and Redis dedup so each transaction reports once. Strong at designing and iterating automation and integration workflows, and fluent with AI tooling as a daily multiplier.

CORE COMPETENCIES

Backend Systems (Node.js / NestJS)

Async Pipelines & Worker Design

PostgreSQL

AWS + CI/CD

React / Next.js

Automation & Integrations

AI-Assisted Delivery

Payments / Web3 Integrations

WORK EXPERIENCE

Nespay

Apr 2025 - Present

Software Developer · Remote

- Built and operate a multi-chain block indexer that relays on-chain payment data to backend services: a forward indexer for real-time block scanning, a configurable backward indexer for gap backfill and outage recovery, and periodic cleanup jobs that prune stale data to keep PostgreSQL lean; Redis dedup so each transaction reports once.
- Own the NestJS/TypeScript backend of a B2B crypto-to-fiat payments platform: wallet transactions, invoicing, and external wallet integrations (Xellar, Privy).
- Set up AWS (EC2, IAM) and CI/CD (GitHub Actions); led core application architecture.
- Integrated RPC services and KYC/compliance providers (Sumsu, Kredibel) with audit trails.
- Led the Backoffice Dashboard (React/Next.js) for user and admin; ran peer code reviews.

ION

Feb 2020 - Dec 2024

Full Stack Software Engineer

- Built an idempotent HRIS→platform integration sync (pull, diff against current state, apply only real changes), replacing manual reconciliation and iterating across edge cases (partial records, field mismatches, ordering).
- Delivered work-management features: praise/endorsement with filters and leaderboards, skill-matched people search, and a time-off system with bulk approvals integrated with public holidays and objectives.
- Stabilized input-component behavior and validation across the app; maintained a large legacy codebase.

Ultra Voucher

Nov 2018 - Jan 2020

Full Stack Web Developer

- Built a digital-voucher automation app (code generation, status tracking, reporting) replacing a manual, untracked Excel process.
- Developed dashboard applications to meet varied business needs.

PROJECTS

Multi-chain Block Indexer Systems Reliability

A relay service that watches the chain and tells backend services when a transaction has been paid. Forward indexer for real-time scanning, a configurable backward indexer for gap backfill and outage recovery, periodic cleanup to avoid database bloat, and Redis dedup so nothing double-reports. Built to stay lean and cheap to run.

Node.js · NestJS · Redis · PostgreSQL · RPC

EDU Chain Hackathon · DeFi Track 3rd place

Built and shipped a DeFi project under hackathon constraints; placed 3rd in the DeFi track.

Web3 · Smart contracts · React

EDUCATION

- B.S. Geophysical Engineering, Bandung Institute of Technology2015
- JavaScript Fullstack Immersive Program, Hacktiv82018

CERTIFICATIONS

- AWS Certified Cloud Practitioner · AWS2024

SKILLS

Languages: JavaScript, TypeScript, Go (basic), Python (basic) **Backend:** Node.js, NestJS, REST APIs, webhooks, worker/queue design

Frontend: React, Next.js **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Neo4j

Cloud / DevOps: AWS (EC2, IAM), Docker, CI/CD (GitHub Actions), Ansible

Practices: Async collaboration, automation & integrations, AI-assisted development, E2E testing (Mocha, Selenium, Nightwatch)

Web3: Wallet integrations (Xellar, Privy), RPC/indexing, on/off-ramp, KYC (Sumsb)
