PROFESSIONAL SUMMARY

Full-stack engineer with 6+ years shipping secure, reliable production systems for work management and B2B payment platforms (Web 2.5). Deep in the JavaScript/TypeScript ecosystem (React.js, Next.js, Node.js, NestJS) on PostgreSQL and AWS with CI/CD (GitHub Actions). Experienced integrating traditional and blockchain-based payment systems, with a focus on crypto-to-fiat on-/off-ramp solutions. Most recently helped build and now operate a multi-chain block indexer in Go that relays on-chain payment data to a NestJS backend, using forward and configurable backward indexers, periodic cleanup jobs to keep the database lean, and Redis dedup so each transaction reports once. Strong at designing automation and integration workflows while maintaining high code quality.

PROFESSIONAL EXPERIENCE

Nespay (PT Webtiga Teknologi Utama) April 2025 - July 2026

Mid-level Software Developer · team of 7

- B2B multi-chain crypto-to-fiat payment platform: wallet transactions, invoice management, and external wallet integrations, letting businesses move value across chains and settle in fiat with KYC compliance built in, without running blockchain infrastructure themselves.
- Contributed to and operate the team's multi-chain block indexer in Go that relays on-chain payment data to the backend: a forward indexer for real-time block scanning, a configurable backward indexer for gap backfill and outage recovery, and periodic cleanup jobs that prune stale data to keep PostgreSQL lean; Redis dedup so each transaction reports once.
 - Developed core application architecture and set up AWS authorization and CI/CD pipelines (GitHub Actions on EC2).
 - Led the development of the Backoffice Dashboard (React.js/Next.js) and the NestJS backend that consumes the indexer webhooks, for both user and admin interfaces.
 - Delivered key features including wallet transactions, invoice management, and external wallet integrations (Xellar, Privy).
 - Integrated RPC services and KYC compliance (Sumsb, Kredibel).
 - Conducted peer code reviews to maintain high-quality, scalable code.

ION February 2020 - December 2024

Full Stack Software Engineer

- ConnectX** (Jan 2023 - Dec 2024, team of 10) — multi-tenant rebuild of the work management platform; companies register and manage their own users, with tiered permissions at app, company, and user level.
- Built a natural-language people search, similar to LinkedIn search: free text such as "who excels in web design with Framer and Base44 in London" returns relevance-ranked results.
 - Enhanced praise and skill features, connecting praise with static data to enable department/division filters and leaderboards, aggregating skill scores, and linking skills with praise to power skill-matched people search.
 - Stabilized form component behavior and validation; conducted peer code reviews.
- Connection** (Feb 2020 - Dec 2022, team of 12) — internal work management app covering department and division workflows, employee tasks, team collaboration, and time tracking.
- Built an idempotent HRIS to platform integration sync (pull, diff against current state, apply only real changes), replacing manual reconciliation and handling edge cases such as partial records, field mismatches, and ordering.
 - Improved the employee time-off system and work timeline, simplifying bulk approvals and integrating time-off data with public holidays and employee work days for better project timeline tracking.
 - Maintained a large legacy codebase.

Ultra Voucher (PT Trimegah Karya Pratama Tbk) November 2018 - January 2020

Full Stack Web Developer · team of 15

- Built the CG Voucher Generator (code generation, status tracking, reporting), replacing a manual process where provider-supplied vouchers were tracked by hand across separate Excel sheets with no status visibility.
- Developed various dashboard applications to answer business needs.

PROJECTS

Multi-chain Block Indexer Systems & Reliability

A Go relay service that watches the chain and tells the NestJS backend when a transaction has been paid. Forward indexer for real-time scanning, a configurable backward indexer for gap backfill and outage recovery, periodic cleanup to avoid database bloat, and Redis dedup so nothing double-reports. Built to stay lean and cheap to run. The service predates me; I took it over, extended it, and run it in production.

Go · Node.js · Redis · PostgreSQL · RPC

EDUCATION

Bachelor of Science (B.S.) in Geophysical Engineering — [Bandung Institute of Technology](#)

August 2011 - September 2015

JavaScript Fullstack Immersive Program — [Hacktiv8](#)

November 2018

KEY SKILLS

Languages: JavaScript, TypeScript, Go

Full-stack JavaScript/TypeScript: Nest.js, Next.js, Node.js, React.js

Backend: Go, REST APIs, webhooks, worker/queue design, async pipelines

Databases: MySQL, PostgreSQL, MongoDB, Neo4j, Elasticsearch, Redis

Cloud & DevOps: AWS (EC2, IAM), Docker, Ansible, CI/CD (GitHub Actions)

Web3: wallet integrations (Xellar, Privy), RPC/indexing, crypto-to-fiat on/off-ramp, KYC (Sumsu)

Testing & Monitoring: Playwright, Selenium, Mocha, Grafana

Experience (years): JavaScript 8 · Node.js 6+ · SQL/NoSQL 5+ · Docker 5+ · NestJS 3+ · React.js 3+ · Next.js 1+

ACCOMPLISHMENTS

3rd place, DeFi Track — [EDU Chain Hackathon](#)

May 2025

CERTIFICATIONS

AWS Certified Cloud Practitioner — [AWS](#) · [credly.com/badges/8be2576a-b003](https://www.credly.com/badges/8be2576a-b003)

September 2024

LANGUAGES

English (Professional, IELTS 7.5), Korean (Conversational), Indonesian (Native)
