氏名 Name	Hana Aliyah Mufidah
職種 Title	Full-Stack Engineer (6+ years)
現住所 Address	Yogyakarta, Indonesia
連絡先 Contact	+62 858-1099-4772 / mufidah.hanaaliyah@gmail.com linkedin.com/in/hana-aliyah-mufidah / github.com/aliyanamu
語学 Language	English (IELTS 7.5, Professional) / Korean (Conversational) / Indonesian (Native)

職務要約 Career Summary

Conscientious full-stack engineer with 6+ years building scalable applications for work management and B2B payment systems (Web 2.5), including a five-year tenure at ION. Works across front-end and back-end (React.js, Next.js, Node.js, Go, AWS), and has integrated both traditional and blockchain-based payment systems with a focus on crypto-to-fiat on-/off-ramp solutions. Collaborative and adaptable across cross-functional teams, with a proven ability to maintain high quality standards under tight deadlines.

職務経歴 Work History

在籍期間	April 2025 - July 2026
企業名	Nespay (PT Webtiga Teknologi Utama) - B2B multi-chain crypto-to-fiat payment platform: businesses settle on-chain payments in fiat with KYC built in. Team of 7.
役職	Mid-level Software Developer
使用技術	Go, NestJS, Node.js, React.js, Next.js, PostgreSQL, Redis, AWS (EC2, IAM), Docker, GitHub Actions, Grafana, Playwright

担当業務 / Responsibilities

- Established the core application architecture together with the engineering team, and streamlined delivery by setting up AWS authorization and CI/CD pipelines (GitHub Actions on EC2).
- Orchestrated development of the Backoffice Dashboard (React.js / Next.js) and the backend server behind the user and admin interfaces, coordinating scope with the operations team.
- Delivered wallet transactions, invoice management, and external wallet integrations (Xellar, Privy) in support of the company's payment roadmap.
- Integrated RPC services and KYC compliance providers (Sumsb, Kredibel), working closely with compliance stakeholders to meet regulatory requirements.
- Contributed to and operated the team's multi-chain block indexer in Go, which relays on-chain payment data to the backend: a forward indexer for real-time block scanning, a configurable backward indexer for gap backfilling and outage recovery, and periodic cleanup jobs that prune stale data to keep PostgreSQL lean, with Redis-based dedup so each transaction is reported once. The NestJS backend consumes its webhooks.
- Contributed to team code quality through regular peer reviews and shared conventions.

在籍期間	February 2020 - December 2024
企業名	ION - Work management SaaS. ConnectX (Jan 2023 - Dec 2024, team of 10), the multi-tenant rebuild with tiered permissions, and Connection (Feb 2020 - Dec 2022, team of 12), its internal predecessor.
役職	Full Stack Software Engineer
使用技術	NestJS, Node.js, React.js, Angular, MySQL, Neo4j, Elasticsearch, Redis, Docker, Vagrant, Playwright

担当業務 / Responsibilities

- Sustained and improved a long-lived legacy codebase over five years, collaborating with designers and product owners.
- Cultivated a reliable data flow between systems by building an integration application that syncs HRIS data into the platform.
- Built a natural-language people search on ConnectX, similar to LinkedIn search, where free text such as "who excels in web design with Framer and Base44 in London" returns relevance-ranked results.
- Enhanced praise and skill features: department/division filters and leaderboards, aggregated skill scores, and skill-matched people search.
- Streamlined the employee time-off system and work timeline, simplifying bulk approvals and integrating time-off with public holidays and employee work days for clearer project timeline tracking.
- Stabilized input component behavior and validation across the application, which reduced recurring defects reported by QA.

在籍期間	November 2018 - January 2020
企業名	Ultra Voucher (PT Trimegah Karya Pratama Tbk) - Digital voucher / e-commerce. Team of 15.
役職	Full Stack Web Developer
使用技術	Node.js, Vue, MySQL

担当業務 / Responsibilities

- Developed a range of dashboard applications in response to requests from internal business teams.
- Streamlined voucher operations by building a web application that generates digital voucher codes for affiliate providers, tracking issuance status and producing reports, replacing a manual and untracked Excel-based process.

活かせる経験・知識・スキル Skills

Languages / Frameworks	TypeScript, JavaScript, Go, Nest.js, Next.js, Node.js, React.js
Databases	MySQL, PostgreSQL, MongoDB, Neo4j, Elasticsearch, Redis
Cloud	AWS (Certified Cloud Practitioner)
DevOps	Docker, Ansible, CI/CD (GitHub Actions)
Web3	Wallet integrations (Xellar, Privy), RPC services, crypto-to-fiat on/off-ramp, KYC (Sumsub)
Testing / Monitoring	Playwright, Selenium, Mocha, Grafana
Experience (years)	JavaScript 8 / Node.js 6+ / SQL・NoSQL 5+ / Docker 5+ / NestJS 3+ / React.js 3+ / Next.js 1+

保有資格・受賞歴 Certifications & Awards

September 2024	AWS Certified Cloud Practitioner
May 2025	3rd place, DeFi Track - EDU Chain Hackathon

学歴 Education

Aug 2011 - Sep 2015	B.S. Geophysical Engineering - Bandung Institute of Technology
Nov 2018	JavaScript Fullstack Immersive Program - Hacktiv8

自己PR Self Promotion

My strength is carrying a feature end to end, from the data layer up to the interface, while keeping the rest of the team informed along the way. At Nespay I work on the Go block indexer that feeds on-chain payment data into the product, a service the team owns together, and I also built the dashboard the operations team relies on daily, so I understand how an infrastructure decision reaches the person using it. I work carefully in domains where mistakes are expensive, such as payments, KYC, and compliance integrations, and I have facilitated communication between engineering and compliance stakeholders to keep those integrations on schedule. I stayed five years at ION because I value seeing a product mature rather than moving on quickly, and I review my teammates' code closely because finding an issue in review costs the team far less than finding it in production. I am now looking for a team in Japan where I can make a long-term contribution to payment and infrastructure work at a larger scale.
