Yogyakarta, Indonesia

PROFESSIONAL SUMMARY

Full-stack engineer with **7+ years** shipping production systems end-to-end, now focused on Web3 and on-chain development. Spent the last year on a **B2B multi-chain crypto-to-fiat payment platform**: wallet infrastructure (Privy, Xellar), **EVM and TRON transaction construction and signing**, RPC services with provider failover, crypto-to-fiat on/off-ramp, and KYC. Diagnosed and fixed a production TRON signing failure at the ECDSA recovery-ID level. Pivoted into Web3 deliberately through a full-time Solidity bootcamp in early 2025, then placed **3rd in the DeFi track at the EDU Chain hackathon**. **TypeScript across the stack** (Node.js, NestJS, Next.js, React). **AWS certified**. Remote from GMT+7.

CORE COMPETENCIES

EVM & TRON Integration

On-Chain Transaction Signing

Web3 Wallets (Privy, Xellar)

Solidity / Smart Contracts

RPC Services & Failover

Crypto-to-Fiat On/Off-Ramp

TypeScript (Full Stack)

Node.js / NestJS

React / Next.js

AWS & CI/CD

WORK EXPERIENCE

Nespay / PT Webtiga Teknologi Utama Apr 2025 - Jul 2026

Software Developer

B2B multi-chain crypto-to-fiat payment platform.

- Built the **EVM and TRON transaction paths**: EVM via Privy's eth_sendTransaction RPC; TRON by constructing transactions with TronWeb, signing hash-only through Privy, then broadcasting through our own RPC layer with provider failover.
- Diagnosed and fixed a **production TRON signing failure**: Privy's raw_sign returns a signature without the recovery byte TRON requires. Corrected hash normalisation and resolved the recovery ID by testing each candidate with ecRecover against the sender, refusing to broadcast on mismatch.
- Ran the **Xellar-to-Privy wallet migration** and hand-wrote the NestJS REST client for Privy's wallet API (not their SDK): wallet lifecycle, policies, key quorums, and signing, with idempotency keys and error unwrapping so the provider's real message surfaced.
- Implemented **invoice-to-wallet assignment** on amount-range locks (closing a find-then-lock race), threshold-based **multi-phase consolidation** into treasury and fee wallets, and automated gas funding on both chains under Redis locks.
- Integrated RPC services and KYC (Sumsub, Kredibel); built the **React/Next.js Backoffice Dashboard** and its NestJS backend; set up AWS authorization and **CI/CD** (GitHub Actions on EC2).

Web3 Pivot - Solidity Bootcamp Jan 2025 - Apr 2025

Full-time Solidity & Smart Contract Study

- Stepped out of full-time work to move deliberately into Web3: completed the **Devweb3jogja Solidity bootcamp** covering smart contracts and the EVM development workflow, then built and shipped on-chain projects to put it into practice.
- Capped the transition by placing **3rd in the DeFi track at the EDU Chain hackathon** (May 2025), building and demoing an on-chain project under a fixed window - which led directly into the on-chain work at Nespay.

Full Stack Software Engineer

ConnectX (Jan 2023 - Dec 2024) - multi-tenant rebuild of the work management platform. Connection (Feb 2020 - Dec 2022) - internal work management app.

- Built a **natural-language people search** on ConnectX, similar to LinkedIn search: free text like "who excels in web design with Framer and Base44 in London" returns relevance-ranked results.
- Enhanced **praise and skill features**: connected praise to static data for department/division filters and leaderboards, aggregated skill scores, and linked skills with praise to power skill-matched people search.
- Built an **integration app to sync data from HRIS** to the platform; improved time-off and work timeline features with bulk approvals and public-holiday integration.
- Stabilized form component behavior and validation across the app; maintained a large legacy codebase.

Ultra Voucher / PT Trimegah Karya Pratama Tbk

Nov 2018 - Jan 2020

Full Stack Web Developer

- Built the **CG Voucher Generator**: an internal web app generating digital voucher codes for affiliate providers, tracking voucher status, and producing reports. Vouchers were previously supplied by providers and tracked by hand across separate Excel sheets with no status visibility.
- Developed various dashboard apps to answer business needs.

PROJECTS

EDU Chain Hackathon - DeFi Track Solidity

Placed 3rd in the DeFi track (May 2025), building and demoing an on-chain project under a fixed hackathon window.

Solidity, EVM, Web3 tooling

TRON Signing Fix (Nespay) EVM / TRON

Fixed a production signing bug where Privy's raw_sign omitted the recovery byte TRON requires: resolved the recovery ID via ecRecover and refused to broadcast on mismatch, turning a silent money bug into a loud failure.

TronWeb, ECDSA recovery, RPC, TypeScript

EDUCATION

B.S. Geophysical Engineering

Aug 2011 - Sep 2015

Bandung Institute of Technology

JavaScript Fullstack Immersive Program

Nov 2018

Hacktiv8

CERTIFICATIONS & ACCOMPLISHMENTS

3rd Place, DeFi Track - EDU Chain Hackathon

May 2025

AWS Certified Cloud Practitioner

Sep 2024

Amazon Web Services

SKILLS

Languages: TypeScript, JavaScript (8 yrs), Solidity, SQL, Python (basic)

Web3 & On-Chain: Solidity (bootcamp + hackathon) and the EVM development workflow, EVM + TRON transaction construction and signing, TronWeb, ECDSA recovery, wallet infrastructure (Privy, Xellar), RPC services with failover, crypto-to-fiat on/off-ramp, KYC (Sumsu)

Backend: Node.js, NestJS, REST APIs, webhooks, worker/queue design, async pipelines **Frontend:** React.js, Next.js, Angular, Vue

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Neo4j

Cloud & DevOps: AWS (Certified Cloud Practitioner), Docker, GitHub Actions CI/CD, Ansible, Grafana

Spoken: English (Professional, IELTS 7.5), Korean (Conversational), Indonesian (Native)
