Curriculum Vitae / Work History

氏名 Name	Hana Aliyah Mufidah
職種 Title	Full-Stack Engineer (7+ years)
現住所 Address	Yogyakarta, Indonesia / Seeking relocation to Japan with visa sponsorship; also open to fully remote (GMT+7)
連絡先 Contact	+62 858-1099-4772 / mufidah.hanaaliyah@gmail.com linkedin.com/in/hana-aliyah-mufidah / github.com/aliyanamu
語学 Language	English (IELTS 7.5, Professional) / Korean (Conversational) / Indonesian (Native)

職務要約 Career Summary

Full-stack engineer, 7+ years, who carries features end to end from the data layer through to the interface. The last 15 months on a B2B multi-chain crypto-to-fiat payment platform: wallet infrastructure, a Go block indexer relaying payments across five networks, and the CI/CD move that took the team from weekly releases to daily. Before that, five years at ION through a full product rebuild, because I would rather see a product mature than move on quickly. TypeScript is the core, with Go and AWS around it. Now seeking a long-term role in payments or platform infrastructure with a team in Japan.

職務経歴 Work History

在籍期間	April 2025 - July 2026
企業名	Nespay (PT Webtiga Teknologi Utama) - B2B multi-chain crypto-to-fiat payment platform: businesses settle on-chain payments in fiat with KYC built in. Team of 7.
役職	Software Developer
使用技術	TypeScript, NestJS, Node.js, React.js, Next.js, Go, PostgreSQL, Redis, AWS (EC2, IAM), Docker, GitHub Actions

担当業務 / Responsibilities

- Contributed to and operated the team's multi-chain block indexer in Go, relaying on-chain payment data across five networks: a forward indexer for real-time block scanning, a configurable backward indexer for gap backfilling and outage recovery, and periodic cleanup jobs that keep PostgreSQL lean, with Redis-based dedup so each transaction is reported once. The NestJS backend consumes its webhooks.
- Diagnosed and fixed production signing failures against the wallet provider's API, and closed a find-then-lock race condition in invoice-to-wallet assignment using amount-range locks.
- Ran the migration between wallet infrastructure providers (Xellar to Privy), building the hand-written REST client behind it: wallet lifecycle, policies, key quorums, and signing.
- Cut deploy time from 15 to 8 minutes by splitting the GitHub Actions pipeline into parallel jobs ordered by priority; set up the AWS authorization and CI/CD pipelines.
- Automated balance consolidation and gas funding across two chains, using per-wallet thresholds with fee-spike protection so refills never fire at a bad moment.
- Led development of the Backoffice Dashboard (React.js / Next.js) and the backend server behind the user and admin interfaces, and established the core application architecture with the engineering team.
- Integrated RPC services and KYC compliance providers (Sumsu, Kredibel).
- Conducted peer code reviews to maintain high-quality, scalable code.

在籍期間	February 2020 - December 2024
企業名	ION - Work management SaaS. ConnectX (Jan 2023 - Dec 2024, team of 10), the multi-tenant rebuild with tiered permissions, and Connection (Feb 2020 - Dec 2022, team of 12), its internal predecessor.
役職	Full Stack Software Engineer
使用技術	NestJS, Node.js, React.js, Angular, MySQL, Neo4j, Elasticsearch, Redis, Docker, Vagrant, Playwright

担当業務 / Responsibilities

- Built a natural-language people search on ConnectX, similar to LinkedIn search, where free text such as "who excels in web design with Framer and Base44 in London" returns relevance-ranked results.
- Built an integration application that syncs HRIS data into the platform, replacing manual reconciliation between the two systems.
- Enhanced praise and skill features: department/division filters and leaderboards, aggregated skill scores, and skill-matched people search.
- Streamlined the employee time-off system and work timeline, simplifying bulk approvals and integrating time-off with public holidays and employee work days for clearer project timeline tracking.
- Stabilized form component behavior and validation across the application.
- Sustained and improved a large, long-lived legacy codebase across two products over five years.

在籍期間	November 2018 - January 2020
企業名	Ultra Voucher (PT Trimegah Karya Pratama Tbk) - Digital voucher. Team of 15.
役職	Full Stack Web Developer
使用技術	Node.js, Vue, MySQL

担当業務 / Responsibilities

- **Built a web application that generates digital voucher codes** for affiliate providers, tracking issuance status and producing reports, replacing a manual and untracked Excel-based process.
- Developed a range of dashboard applications to answer business needs.

活かせる経験・知識・スキル Skills

Languages / Frameworks	TypeScript, JavaScript, Go, Nest.js, Next.js, Node.js, React.js
Databases	MySQL, PostgreSQL, MongoDB, Neo4j, Elasticsearch, Redis
Cloud	AWS (Certified Cloud Practitioner)
DevOps	Docker, Ansible, CI/CD (GitHub Actions)
Web3	Wallet infrastructure via REST APIs (Privy, Xellar), EVM and TRON transaction signing, RPC services, crypto-to-fiat on/off-ramp, KYC (Sumsu)
Testing / Monitoring	Playwright, Selenium, Mocha, Grafana
Experience (years)	JavaScript 7+ / Node.js 6+ / SQL · NoSQL 5+ / Docker 5+ / NestJS 3+ / React.js 3+ / Next.js 1+

保有資格・受賞歴 Certifications & Awards

September 2024	AWS Certified Cloud Practitioner
May 2025	3rd place, DeFi Track - EDU Chain Hackathon

学歴 Education

Aug 2011 - Sep 2015	B.S. Geophysical Engineering - Bandung Institute of Technology
Nov 2018	JavaScript Fullstack Immersive Program - Hacktiv8

自己PR Self Promotion

My strength is carrying a feature end to end, from the data layer up to the interface, while keeping the rest of the team informed along the way. At Nespay I work on the Go block indexer that feeds on-chain payment data into the product, a service the team owns together, and I also built the Backoffice Dashboard used by admins and users, so I understand how an infrastructure decision reaches the person using it. I work carefully in domains where mistakes are expensive, such as payments, KYC, and compliance integrations. I stayed five years at ION because I value seeing a product mature rather than moving on quickly, and I review my teammates' code closely because finding an issue in review costs the team far less than finding it in production. I am now looking for a team in Japan where I can make a long-term contribution to payment and infrastructure work at a larger scale.
