PROFESSIONAL SUMMARY

Built the wallet infrastructure for a B2B multi-chain crypto-to-fiat payments platform: a hand-written REST client against Privy's wallet API, the EVM and TRON transaction paths on top of it, and the production signing failures that came with them. Eight years full-stack in TypeScript (Node.js, NestJS, Next.js, React), the last fifteen months on payments. At home in logs, RPC traces, and a provider's raw API responses.

WORK EXPERIENCE

Software Developer · Nespay Apr 2025 – Jul 2026

B2B multi-chain crypto-to-fiat payments platform. Team of 7.

- **Ran the migration from Xellar to Privy** for wallet infrastructure, and built the hand-written REST client behind it: wallet lifecycle, policies, key quorums, signing, and idempotency keys.
- **Fixed production signing failures on TRON** caused by `raw_sign` returning no recovery byte, resolving the recovery ID via `ecRecover` and refusing to broadcast on mismatch.
- **Built the EVM and TRON transaction paths** (TronWeb, own RPC layer with provider failover, automated gas funding), plus threshold-based multi-phase consolidation from merchant wallets through transit into treasury.
- **Operated the multi-chain block indexer in Go**: forward indexing for real-time scanning, backward indexing for outage recovery, Redis dedup so each transaction reports exactly once. Cut deploy time from 15 to 8 minutes by parallelizing CI/CD (GitHub Actions on EC2). Led the React/Next.js Backoffice Dashboard and its NestJS services, and integrated KYC (Sumsu, Kredibel).

Full Stack Software Engineer · ION Feb 2020 – Dec 2024

Fully remote, distributed team. ConnectX (2023–2024, team of 10), multi-tenant rebuild of the work management platform. Connection (2020–2022, team of 12).

- **Built a natural-language people search** on ConnectX, similar to LinkedIn search: free-text queries return relevance-ranked results across skills, tools, and location.
- **Enhanced praise and skill features**, aggregating skill scores and linking them to praise to power skill-matched search, and built an HRIS integration app.
- **Improved time-off and work timeline features** including bulk approvals and public holiday handling, and stabilized form validation across a large legacy codebase.

Full Stack Web Developer · Ultra Voucher Nov 2018 – Jan 2020

Team of 15.

- **Built the CG Voucher Generator**, an internal web app issuing digital voucher codes for affiliate providers with status tracking and reporting, replacing provider-supplied vouchers tracked by hand across separate Excel sheets.

SKILLS

Languages: TypeScript, JavaScript (8 yrs), Go, SQL **Stack:** Node.js, NestJS, React.js, Next.js, REST APIs, webhooks, worker/queue design

Web3: Wallet infrastructure (Privy, Xellar), EVM and TRON transaction construction and signing, TronWeb, RPC services, crypto-to-fiat on/off-ramp, KYC (Sumsu)

Infra: PostgreSQL, Redis, MongoDB, AWS, Docker, GitHub Actions CI/CD, Grafana, Playwright

Spoken: English (Professional, IELTS 7.5), Korean (Conversational), Indonesian (Native)

EDUCATION, CERTIFICATION & AWARDS

3rd place, DeFi Track — EDU Chain Hackathon May 2025

AWS Certified Cloud Practitioner · Amazon Web Services Sep 2024

B.S. Geophysical Engineering · Bandung Institute of Technology Aug 2011 – Sep 2015
