Hana Aliyah Mufidah

Full-Stack Engineer

Yogyakarta, ID | +62 858-1099-4772 | mufidah.hanaaliyah@gmail.com | linkedin.com/in/hana-aliyah-mufidah | github.com/aliyanamu

PROFESSIONAL SUMMARY

Full-stack engineer, 7+ years, who carries features end to end from the data layer through to the interface. TypeScript across the stack (NestJS, Node.js, Next.js, React) on PostgreSQL and AWS. The last 15 months on a B2B multi-chain crypto-to-fiat payment platform: wallet infrastructure, on-chain transaction paths, and the team's Go block indexer. Strong at turning fragile manual processes into automation that holds up in production.

PROFESSIONAL EXPERIENCE

DataAnnotation

June 2026 - Present

AI Trainer

- **Author agentic coding tasks end to end**: select real open-source codebases, write the problem, build the verifier and a reproducible containerized environment, and tune difficulty so frontier models fail on the intended crux rather than on an ambiguous prompt.
- Compare and grade coding-agent trajectories against rubrics, including code review and bug fix tasks, and write evidence-based rationales for each rating.
- Review other contributors' submissions: check task deliverables, correct rubrics and ratings, and tighten rationales.
- Rate model responses in Indonesian and English, including image-prompt preference review.

Nespay (PT Webtiga Teknologi Utama)

April 2025 - July 2026

Software Developer

B2B multi-chain crypto-to-fiat payment platform: wallet transactions, invoice management, and external wallet integrations, letting businesses move value across chains and settle in fiat with KYC compliance built in, without running blockchain infrastructure themselves.

- **Contributed to and operated the team's multi-chain block indexer in Go** that relays on-chain payment data to the backend: a forward indexer for real-time block scanning, a configurable backward indexer for gap backfill and outage recovery, and periodic cleanup jobs that prune stale data to keep PostgreSQL lean; Redis dedup so each transaction reports once.
- **Cut deploy time from 15 to 8 minutes** by splitting the GitHub Actions pipeline into parallel jobs ordered by priority; developed core application architecture and set up AWS authorization and CI/CD.
- Led the development of the Backoffice Dashboard (React.js/Next.js) and the NestJS backend that consumes the indexer webhooks, for both user and admin interfaces.
- **Ran the migration between wallet infrastructure providers** (Xellar to Privy) and built the hand-written REST client behind it, covering wallet lifecycle, policies, key quorums, and signing.
- Diagnosed and fixed production signing failures against the provider's API, and implemented invoice-to-wallet assignment on amount-range locks to close a find-then-lock race condition.
- Automated balance consolidation and gas funding across two chains, using per-wallet thresholds with fee-spike protection to avoid refilling at a bad moment.
- Integrated RPC services and KYC compliance (Sumsub, Kredibel).
- Conducted peer code reviews to maintain high-quality, scalable code.

ION

February 2020 - December 2024

Productivity Engineer

ConnectX (Jan 2023 - Dec 2024) — multi-tenant rebuild of the work management platform; companies register and manage their own users, with tiered permissions at app, company, and user level.

- **Built a natural-language people search**, similar to LinkedIn search: free text such as "who excels in web design with Framer and Base44 in London" returns relevance-ranked results.
- Enhanced praise and skill features, connecting praise with static data to enable department/division filters and leaderboards, aggregating skill scores, and linking skills with praise to power skill-matched people search.
- Stabilized form component behavior and validation; conducted peer code reviews.

Connection (Feb 2020 - Dec 2022) — internal work management app covering department and division workflows, employee tasks, team collaboration, and time tracking.

- **Built an integration app** to sync data from HRIS to the platform.
- Improved the employee time-off system and work timeline, simplifying bulk approvals and integrating time-off data with public holidays and employee work days for better project timeline tracking.
- **Recovered data after a database corruption incident** when the only backup was 2-3 days stale: extracted every API request from the logs and replayed them in order to rebuild the missing records.
- Maintained a large legacy codebase.

Ultra Voucher (PT Trimegah Karya Pratama Tbk)

November 2018 - January 2020

Full Stack Web Developer

- **Built the CG Voucher Generator** (code generation, status tracking, reporting), replacing a manual process where provider-supplied vouchers were tracked by hand across separate Excel sheets with no status visibility.
- Developed various dashboard applications to answer business needs.

KEY SKILLS

Languages: TypeScript, JavaScript, Go, SQL

Backend: Node.js, NestJS, REST APIs, webhooks, worker/queue design, async pipelines

Frontend: React.js, Next.js, Angular, Vue

Databases: MySQL, PostgreSQL, MongoDB, Neo4j, Elasticsearch, Redis

Cloud & DevOps: AWS (EC2, IAM), Docker, Ansible, CI/CD (GitHub Actions)

Web3: wallet infrastructure via REST APIs (Privy, Xellar), EVM + TRON transaction construction and signing, TronWeb, RPC/indexing, crypto-to-fiat on/off-ramp, KYC (Sumsub)

Testing & Monitoring: Playwright, Selenium, Mocha, Grafana

Experience (years): JavaScript 7+ · Node.js 6+ · SQL/NoSQL 5+ · Docker 5+ · NestJS 3+ · React.js 3+ · Next.js 1+

EDUCATION

Bachelor of Science (B.S.) in Geophysical Engineering — Bandung Institute of Technology — August 2011 - September 2015

JavaScript Fullstack Immersive Program — Hacktiv8 — November 2018

CERTIFICATIONS, AWARDS & LANGUAGES

AWS Certified Cloud Practitioner — AWS · credly.com/badges/8be2576a-b003 — September 2024

3rd place, DeFi Track — EDU Chain Hackathon — May 2025

English (Professional, IELTS 7.5), Korean (Conversational), Indonesian (Native)
