PROFESSIONAL SUMMARY

Backend and full-stack engineer with 6+ years building scalable, reliable systems for B2B payments and work-management platforms. Designed and operated distributed worker pipelines for real-time, high-throughput event processing - a multi-chain settlement indexer with deduplication, chain-finality checks, and crash recovery - alongside core backend architecture on AWS with CI/CD. Comfortable owning systems end-to-end: asynchronous processing, worker orchestration, data integrity, and secure delivery.

CORE COMPETENCIES

Distributed Worker Orchestration

Asynchronous / Event Pipelines

High-Throughput Systems Design

Backend Architecture

Idempotency & Crash Recovery

AWS & CI/CD

PostgreSQL / Redis

RPC & API Integration

WORK EXPERIENCE

Nespay Apr 2025 - Present

Software Developer - Backend & Full-Stack

- Architected and built a multi-chain settlement indexer - three coordinated workers (real-time forward polling, gap-closing backfill, chain-specific finality confirmation) behind an RPC layer, with Redis-based deduplication and PostgreSQL crash recovery - reconciling on-chain USDT deposits to open invoices in real time across 5 chains, with no double-counting or state loss.
- Developed core application architecture; set up AWS authorization and CI/CD pipelines (GitHub Actions on EC2).
- Delivered wallet transactions, invoice management, and external wallet integrations (Xellar, Privy); integrated RPC services and KYC compliance (Sumsu, Kredibel).
- Led the Backoffice Dashboard (React.js/Next.js) and backend server for user and admin interfaces; ran peer code reviews for scalable, high-quality code.

ION Feb 2020 - Dec 2024

Full Stack Software Engineer

- Built an idempotent integration service to sync data from an HRIS into the platform - automating a fragile manual reconciliation and preventing duplicate or corrupted records.
- Enhanced praise/endorsement features: department/division filters, leaderboards, and skill-matched people search.
- Improved the employee time-off system and work timeline; simplified bulk approvals; integrated time-off with public holidays and objectives.
- Maintained a legacy codebase; stabilized input-component behavior and validation across the application.

Ultra Voucher Nov 2018 - Jan 2020

Full Stack Web Developer

- Built a web app to generate digital voucher codes for affiliate providers, tracking status and generating reports - replacing a manual, untracked Excel-based process.
- Developed various dashboard applications for business needs.

PROJECTS

Multi-Chain Settlement Indexer Systems / Reliability

Real-time deposit-detection and settlement pipeline. Split a naive single loop into three coordinated workers (forward polling, backfill, finality confirmation) behind an RPC layer; Redis for dedup, PostgreSQL for crash recovery, webhooks reconciling each transfer to its open invoice by amount. Worker separation was driven by instrumenting where detection was slow or gappy.

Node.js · PostgreSQL · Redis · RPC · webhooks · multi-chain

EDU Chain Hackathon - DeFi Track 3rd Place

Placed 3rd in the DeFi track (May 2025), building on the wallet, on/off-ramp, and RPC integration work shipped at Nespay.

EDUCATION

B.S. Geophysical Engineering - Institut Teknologi Bandung	2015
JavaScript Fullstack Immersive Program - Hacktiv8	2018

CERTIFICATIONS

AWS Certified Cloud Practitioner - Amazon Web Services	2024
--	------

SKILLS

- Backend:** Node.js, Nest.js, distributed workers, async/event pipelines, RPC, REST APIs, webhooks
- Languages:** TypeScript, JavaScript, Go (basic)
- Frontend:** React.js, Next.js
- Data:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Neo4j
- Cloud & DevOps:** AWS (Certified Cloud Practitioner), Docker, GitHub Actions CI/CD, Ansible, Vagrant
- Testing:** Nightwatch, Selenium, Mocha
- Web3:** wallet integrations (Xellar, Privy), crypto-to-fiat on/off-ramp, KYC (Sumsub)
- Spoken:** English (Professional), Indonesian (Native), Korean (Conversational)
