SUMMARY

Fullstack engineer with backend emphasis - 7+ years shipping production JavaScript/TypeScript across Node.js services, React/Next.js frontends, and AWS infrastructure. Currently leading core architecture at Nespay's B2B crypto-to-fiat platform: backend services, RPC integrations, multi-provider KYC orchestration, CI/CD on EC2, and the React/Next admin UI. Comfortable owning a feature end to end - from API design and authentication to frontend operations dashboards. Hackathon-grade Solidity delivery on the side. Looking for senior-IC fullstack work where the backend is real and the frontend has to be debuggable.

EXPERIENCE

Mid-level Software Developer (senior scope) - Nespay

B2B crypto-to-fiat payment platform

April 2025 - Present

- Designed and implemented core backend architecture (Node.js/Nest.js) and AWS authorization/IAM for a greenfield B2B crypto-to-fiat platform; owned CI/CD pipelines (GitHub Actions on EC2).
- Built backend services + APIs for both user-facing and admin interfaces, including authentication, request validation, and integration layers for wallet and KYC providers.
- Integrated RPC services and multi-provider KYC compliance (Sumsb, Kredibel) with a provider-agnostic adapter - async webhook handling, signed callbacks, retry/backoff, idempotent state transitions.
- Integrated external wallet providers (Xellar, Privy) on top of the same adapter pattern; live transactions in production.
- Led development of the Backoffice Dashboard (React.js / Next.js) for ops monitoring of transactions, invoices, wallet operations, and KYC status state machines.
- Conducted peer code reviews to maintain high-quality, scalable code across services and UI.

Full Stack Software Engineer - ION

Enterprise work-management web platform

February 2020 - December 2024

- Maintained a long-running production codebase while shipping new features alongside other engineers - frontend stabilisation, condition-based UI logic, complex form behaviour.
- Built an integration app to sync data from HRIS into the platform (backend ETL + UI surfacing).
- Enhanced praise/endorsement features: connected to static reference data, enabled department/division/skill-based filters and people-search ranking - touching both data modelling and UI.
- Improved time-off + work-timeline features: simplified bulk approvals, integrated public-holiday data, joined time-off with objectives. Cross-cutting backend + frontend work.
- Stabilised input components and validation across the application, cutting user-reported bugs through controlled-component fixes and tighter regression coverage.

Full Stack Web Developer - Ultra Voucher

December 2018 - January 2020

- Built dashboard apps for internal business operations.
- Highlight: web app for generating and tracking digital voucher codes for affiliate partners - replaced a manual, error-prone Excel process with an auditable system.

Earlier roles

- **Frontend Web Developer** - Sosial Bisnis Indonesia (*Dec 2017 - Jun 2018*)
- **Non-GDS** - Traveloka (*May 2017 - Jul 2017*)
- **Marketing Assistant** - Wahana Kendali Mutu (*Sep 2016 - Feb 2017*)
- **Mathematics Instructor** - DAEKYO UK (*Apr 2016 - Aug 2016*)

SKILLS

Backend (Node.js): Node.js, Nest.js, REST + RPC API design, authentication/authorization (AWS IAM), webhook + async integrations, retry/backoff, idempotency.

Frontend: React.js, Next.js, TypeScript, controlled-component / form patterns, ops dashboards.

Databases: MongoDB, PostgreSQL, MySQL, Redis, Elasticsearch, Neo4j - data modelling and integration across mixed stores.

Cloud / DevOps: AWS (EC2, IAM), Docker, Ansible, Vagrant, GitHub Actions CI/CD on EC2.

Web3 / Payments: Crypto-to-fiat on/off-ramp, wallet integrations (Xellar, Privy), KYC provider orchestration (Sumsub, Kredibel), Solidity (hackathon-grade).

Testing: Nightwatch, Selenium, Mocha.

PROJECTS & ACCOMPLISHMENTS

- **EDU Chain Hackathon - DeFi Track (3rd place, May 2025)** - Built and deployed a Solidity DeFi protocol with a JS/TS frontend end to end in 48 hours; demonstrates fast ramp on unfamiliar stacks (relevant to AI-infra ramp).

EDUCATION

- **B.S. Geological / Geophysical Engineering** - Institut Teknologi Bandung (*2011 - 2015, GPA 3.05*)
- **JavaScript Fullstack Immersive Program** - Hacktiv8 (*November 2018*)

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** (*Sep 2024 - Sep 2027*)
- **EFSET Express - High Proficiency (CEFR C1/C2)**
- **IELTS** (*May 2017 - May 2019*)
- **Hacktiv8 Course Completion Certificate** (*November 2018*)
